Surestep Launches Sprout3D™, a First-of-its-Kind Cranial Remolding Orthosis Designed to Treat Plagiocephaly and Brachycephaly

2025-03-03

SOUTH BEND, Ind., March 3, 2025 – Surestep announced today the launch of its innovative 3D-printed cranial remolding orthosis, **Sprout3D™**, featuring a cutting-edge 3D design that delivers precision, comfort, and efficiency.

The only cranial helmet with unique trim lines specifically designed for plagiocephaly and brachycephaly, Sprout3D was thoughtfully developed by leading cranial specialists in collaboration with a team of skilled 3D fabrication experts, utilizing over 10,000 data points, decades of clinical expertise, and extensive 3D fabrication resources to ensure the best possible patient outcomes.

“Adding the Sprout3D to our product portfolio allows us to serve more patients by offering head to toe pediatric orthotic solutions,” said Surestep Vice President and General Manager Suzi Klimek. “Our priority is fabricating quality products that provide life-changing outcomes, and this device will provide clinicians with more options to meet individual patient needs and preferences.”

Intentionally designed for comfort and ease of use, Sprout3D’s unique features include a lightweight structure, a first-of-its-kind hinge opening with a seamless latch and single-side opening, perforated foam for better ventilation, and indication-specific trim lines. Fabricated in the United States with top-of-the-line 3D printing technology, Sprout3D allows for quick turnaround times and a superior out-of-box experience with minimal in-clinic modifications.
